

actuate

Co-funded by the Intelligent Energy Europe Programme of the European Union

„Aren't the trams already green enough?“

The city's trams are indeed operated **without emission** using electricity.

Through the use and application of energy-efficient driving techniques, an **additional 3% of energy**, can be saved on top of that!

From these extra energy savings, it is possible to supply the equivalent of **420 homes** with an average annual energy consumption of 4000 kWh!
