# „Taking your foot from the accelerator? That won't make a difference!”

It is essential to **use the momentum of the bus** in motion and not unnecessarily hit the accelerator, especially when on downhill gradients or shortly before coming to a stop. Using such techniques also **increases passenger comfort**, creating **a smoother and more fluid ride** for everyone aboard!

Other vehicles on the road also benefit from the smooth and fluid run of a bus.

As this generally causes far less stop and go driving patterns for cars or trucks on the same road. **Rolling** is simply the most **efficient and effective way to save** any kind of fuel or energy!
