Co-funded by the Intelligent Energy Europe Programme of the European Union

„The passengers won't notice any of this?“

The passengers are indeed not able to notice **the actual difference in energy consumption**.

However, all passengers will appreciate the **smoother and more fluid ride** caused by using energy-saving driving techniques!

This allows everyone to arrive at their destination **more relaxed** and **look forward** to their next journey on a public bus.

4 of 5 passengers have stated that **energy-saving measures are important** to them.
